Fuel System Solutions has the ability to design and manufacture for large or small petroleum marketing operations ... together we can provide a cost effective, turnkey, fuel storage and dispensing package designed to suit your fuel control needs.

**“Self bunded and containerised for ease of transportation  
with  
a range of dispensing options to suit your  
application”**

**Containerised Tanks**

Containerised tanks are suitable for storing and dispensing a range of petroleum products including fuel, lubricants and waste oil. These are ideal for unattended or retail refuelling when combined with a purpose built pumping package and fuel management system.

**Pumps & Dispensers**

FSS can supply a range of pumps, dispensers and compatible accessories designed to suit your unattended and / or retail refuelling application. Safety features such as emergency stops are incorporated into the design. Single or dual hose dispensing models are available; all factory tested and ready for installation.

**Fuel Management Systems**

FSS supply a range of fuel management systems designed to make refuelling and site control simple. Various methods of authorisation are available including pin-pads, swipe cards or key tags. Web based or USB data transfer for analysis are other available options.

**Retail Options**

An integrated outdoor payment terminal or credit card acceptor turns your fuel management system into a complete retail dispensing and payment unit. All-in-one systems are available complete with receipt printers.

Other options available include awnings, lighting packages, filtration, solar kits, spill containment units and kits, safety & regulatory equipment, bollards and reflective strips.

**T68 : fitted with DCA and stand alone card acceptor**
